<http://www.novell.com/products/identitymanager/launch/offers.html>

Novell Identity Manager 4 Advanced Edition securely manages identity and provisioning across physical, virtual and cloud environments through an intelligent identity framework that enables enterprises to leverage existing IT assets and new computing models like SaaS, while simultaneously reducing costs and ensuring compliance. It delivers benefits for all critical stakeholders in the organization. For instance, it allows:

- CIOs to improve IT organizational productivity with simplified administration and advanced reporting while maintaining robust controls for better service levels that allow the business to take advantage of new opportunities
  - CISOs to ensure compliance and security at low costs across IT resources distributed amongst physical, virtual, and cloud environments
  - Line of Business (LoB) managers to maintain team productivity by providing immediate, role-based access to resources along with self-service through an easy to use interface
  - IT managers to accomplish more with their available resources through increased automation - from more efficiently managing help desk calls to achieving compliance mandates
- Enhancements in this Release
- Roles-based Provisioning: Most efficient provisioning solution with integrated roles, rules, and workflow capabilities made available through a user-friendly interface

- **Advanced Reporting:** Comprehensive reporting on present and historic states across in-house and cloud deployments with the capability to build additional customized reports
- **Cloud Provisioning:** Ready-made connectors to extend enterprise policies to SaaS applications such as Salesforce.com
- **Policy Integration:** Role Mapping Administrator that can discover and integrate authorizations within IT systems to enterprise roles to create a unified governing policy
- **Content Control:** A package manager that simplifies creation, distribution, and usage of high-quality building blocks of modular policy content
- **Simplified Installation and Deployment:** Integrated installer that unifies all components of Identity Manager along with smart deployment tools such as Designer and Analyzer to automate the deployment process
- **Standards-based interfaces:** Over 100 identity services made available through REST and SOAP interfaces for easy integration in existing environments
